Lab instructions

Goal

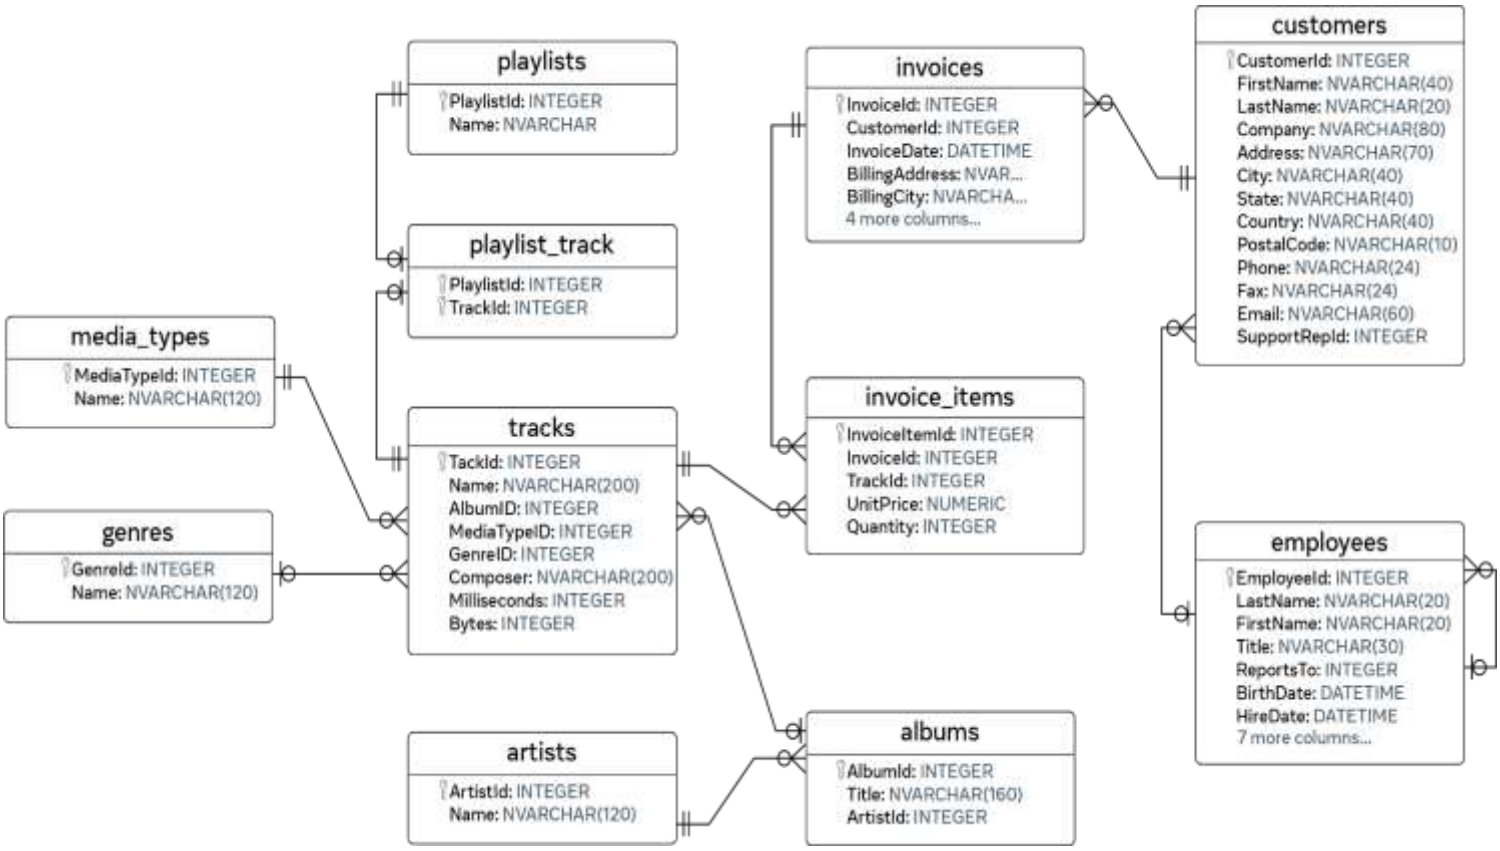

The goal of this Lab is for you to learn how to use the SQL ORDER BY and WHERE clauses to sort and filter data.

❖ Task 1

Scenario

In this Lab we are going to consider the well-known "**chinook sample**" database, which is widely used for demos and testing purposes.

The chinook sample database consists of the following database schema.

Instructions

1. Create the chinook database and use it in MySQL terminal.
2. Create the customer table as described in the database schema.
3. Insert the following records of data into the Customer table

CustomerID	FirstName	LastName	City	State	Country
1	Luís	Gonçalves	São José dos Campos	SP	Brazil
2	Eduardo	Martins	São Paulo	SP	Brazil
3	Alexandre	Rocha	São Paulo	SP	Brazil
4	Roberto	Almeida	Rio de Janeiro	RJ	Brazil
5	Mark	Philips	Edmonton	AB	Canada
6	Jennifer	Peterson	Vancouver	BC	Canada

Please attempt the following tasks before you continue, so that you can check and compare your answers with our solution.

4. Write a SQL statement to display all data existing in the customer table.
5. Write a SQL statement to sort the result set in ascending order by first name.
6. Filter the result set data based on a condition where country = Canada.
7. Shows all customers from Canada with the right *Alphabetical order.*
8. Write a SQL statement to display only the name and the country for customers from Canada.
