Lab instructions

Goal

The goal of this Lab is for you to learn how to create an INNER JOIN and LEFT JOIN queries.

Task 1

Scenario:

Little Lemon is a family-owned Mediterranean restaurant, focused on traditional recipes served with a modern twist. The Little Lemon database contains many tables of data including Customers and Bookings.

The Customers table contains the following data about each customer:

- Customer ID,
- Full name,
- and phone number.

```
mysql> select * from Customers;
+------------+------------------+-------------+
| CustomerID | FullName         | PhoneNumber |
+------------+------------------+-------------+
|          1 | Vanessa McCarthy |   757536378 |
|          2 | Marcos Romero    |   757536379 |
|          3 | Hiroki Yamane    |   757536376 |
|          4 | Anna Iversen     |   757536375 |
|          5 | Diana Pinto      |   757536374 |
+------------+------------------+-------------+
```

The Bookings table contains the following data on each booking:

- booking ID,
- booking date,
- table number,
- number of guests,
- and the ID of the customer who made the booking.

```
mysql> select * from Bookings;
+-----------+-------------+-------------+-----------------+------------+
| BookingID | BookingDate | TableNumber | NumberOfGuests | CustomerID |
+-----------+-------------+-------------+-----------------+------------+
|        10 | 2021-11-11  |           7 |               5 |          1 |
|        11 | 2021-11-10  |           5 |               2 |          2 |
|        12 | 2021-11-10  |           3 |               2 |          4 |
+-----------+-------------+-------------+-----------------+------------+
```

1. Create **little_lemon** database;
2. Create the Customers table;
3. Insert data into Customers table;
4. Create the Bookings table;
5. Insert data into Bookings table;
6. Little Lemon want a list of all customers who have made bookings.
   Write an INNER JOIN SQL statement to combine the full name and the phone number of each customer from the Customers table with the related booking date and 'number of guests' from the Bookings table.
7. Little Lemon want to view information about all existing customers with bookings that have been made so far. This data must include customers who haven't made any booking yet.
   Write a LEFT JOIN SQL statement to view the customer id from Customers table and the related booking id from the Bookings table.
