Lab instructions

Goal

The goals of this Lab are:

- Group data using the GROUP BY clause.
- Filter grouped data using the HAVING clause.

Task 1

Scenario:

Lucky Shrub is a medium-sized garden design firm that sells indoor and outdoor plants, making them a one stop shop for clients. In this lab, you must complete the following tasks to help Lucky Shrub group and filter grouped data for their reports using the GROUP BY and HAVING clauses.

The **Orders** table used for this lab contains the following data: OrderID, Department, OrderDate, OrderQty and OrderTotal as shown below.

OrderID	Department	OrderDate	OrderQty	OrderTotal
1	Lawn Care	2022-05-05	12	500
2	Decking	2022-05-22	150	1450
3	Compost and Stones	2022-05-27	20	780
4	Trees and Shrubs	2022-06-01	15	400
5	Garden Decor	2022-06-10	2	1250
6	Lawn Care	2022-06-10	12	500
7	Decking	2022-06-25	150	1450
8	Compost and Stones	2022-05-29	20	780
9	Trees and Shrubs	2022-06-10	15	400
10	Garden Decor	2022-06-10	2	1250
11	Lawn Care	2022-06-25	10	400
12	Decking	2022-06-25	100	1400
13	Compost and Stones	2022-05-30	15	700
14	Trees and Shrubs	2022-06-15	10	300
15	Garden Decor	2022-06-11	2	1250
16	Lawn Care	2022-06-10	12	500
17	Decking	2022-06-25	150	1450
18	Trees and Shrubs	2022-06-10	15	400
19	Lawn Care	2022-06-10	12	500
20	Decking	2022-06-25	150	1450
21	Decking	2022-06-25	150	1450

Instructions:

1. Create database named '**luckyshrub_db**'
2. Create **Orders** table
3. Insert data into **Orders** table
4. Write a SQL SELECT statement to group all records that have the same order date.
5. Write a SQL SELECT statement to retrieve the number of orders placed on the same day.
6. Write a SQL SELECT statement to retrieve the total order quantities placed by each department.
7. Write a SQL SELECT statement to retrieve the number of orders placed on the same day between the following dates: 1st June 2022 and 30th June 2022.
