Information System Design

Use Case & Class Diagram

In an educational institution, the goal is to manage the reservation of classrooms as well as teaching equipment (laptops and/or video projectors). Only teachers are authorized to make reservations (subject to the availability of the room or equipment). The room schedule can be consulted by everyone (teachers and students). However, the hourly summary for each teacher (calculated from the room schedule) can only be accessed by teachers.

Finally, for each program, there is a designated teacher who alone is allowed to edit the hourly summary for the entire program.

Question: Model this context using a use-case diagram and a class diagram
